A phase locked loop IC consists of a voltage-controlled oscillator (VCO) and a phase detector. In this circuit, we will use only the VCO portion of the 4046 IC and not the phase detector. We use the chip just to generate a digital signal that can be used as a clock signal.

~~How to Build a Voltage-controlled Oscillator (VCO) Circuit ...~~

The IC 4046 is a Phase-locked loop IC of CMOS digital (combined analog and digital chip). A Phase-locked loop (PLL) has a voltage-controlled oscillator (VCO). The VCO signal and an input signal are sent to a phase comparator which
