spermatocyte: a male gametocyte, from which a spermatozoon develops oocyte : a cell that develops into an egg or ovum; a female gametocyte polar body : one of the small cells that are by-products of the meiosis that forms an egg

~~Human Reproductive Anatomy and Gametogenesis | Boundless ...~~

Although not well studied, *P. vivax* gametocyte development requires probably about 48 h and they do not remain more than 3 days after differentiation towards sexual maturity. However, gametocyte densities become greater as blood-stage infections progress, seeming to come in waves at 5-day intervals and the production of gametocytes continues as the infection progresses on into chronicity becoming asymptomatic or more mildly symptomatic.

8. Female Reproductive Structures and Events Development and maturation of the female cone take 2-3 years, the exact time depends on the species. Female cones are typically produced on higher branches of the tree. Because the individual tree's pollen is generally shed downward, this arrangement favors crossing between different individuals 1.

~~Solved: The Female Gametophyte Of Pine Is Produced ...~~

Upon taking a blood meal, gametocytes are transferred to a mosquito's midgut lumen where they differentiate into male and female gametes. After complete sexual reproduction and successive processes of sporogonic development, mature sporozoites accumulate in the vector's salivary gland, ready to be inoculated into a new host. Therefore, the presence of gametocytes in circulation of infected individuals is imperative for malaria to remain endemic in a given community.

~~Read Online A Female Gametocyte Develop Answer Key~~

The alternate, nonsexual phase is the sporophyte. In the gametophyte phase, male and female organs (gametangia) develop and produce eggs and sperm (gametes), which unite in fertilization (syngamy). The fertilized egg (zygote) develops into the sporophyte, which produces numerous single-celled spores, which in turn develop directly into new gametes.

~~what does a female gametophyte develop ... - Yahoo Answers~~

Answer and Explanation: Typical gametophyte of seed plant is pollen grain. As they develop flowers, the male gametophyte is developed in the anther of a stamen.

~~Describe the male gametophyte of a seed plant. | Study.com~~

After the initiation step, the female gametophyte controls seed development by providing maternal cues required for this process; specifically, the female gametophyte contains maternal factors before fertilization that are required for embryo and endosperm development after fertilization. Female gametophyte-expressed genes required for embryo and endosperm development are referred to as gametophytic maternal-effect genes (Ray, 1997; Drews et al., 1998; Drews and Yadegari, 2002).

~~Female Gametophyte Development | Plant Cell~~

Female gametocyte activation assay. Gametocyte cultures were produced as described above, with the exception that day 16 gametocyte cultures were used. The reason for this is that, reportedly, female gametocytes mature slightly later than male gametocytes in culture . An anti-Pfs25 antibody (4B7; obtained from MR4) was coupled to Cy3 by use of an Amersham CyDye monoclonal antibody labeling kit (GE Healthcare) according to the manufacturer's recommendations.
