COMPRESSIBLE FLOW FUNDAMENTALS In physics, fluid dynamics is a sub-discipline of . fluid

mechanics that deals with fluid flow—the natural science of fluids (liquids and gases) in motion. It has several subdisciplines itself, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion).

COMPRESSIBLE FLOW □ FUNDAMENTALS

Applying the steady flow energy equation between (1) and (2) we have : □ - P = □U + □F.E. + □K.E. + □P.E. For Adiabatic Flow, □ = 0 and if no work is done then P = 0 □U + □F.E. = □H hence

: 0 = ΔH + ΔK.E. + ΔP.E. In specific energy terms this becomes : 0 = Δh + Δk.e. + Δp.e. rewriting we get: h1 + u 1

Gas Dynamics is a topic of fundamental interest to Mechanical

and Aerospace engineers that provides a link between core subjects i.e. "Fluid Mechanics and Thermodynamics". It pertains the basic theory of compressible flow, formation of shock waves and expansion waves, nozzle flows.

For example, considerations of

compressible flow show that at a Mach number of 0.3 (a velocity of 335 ft/s, or 228 mph, at sea level), the maximum possible change in density in a flow field is about 6 percent and the maximum change in temperature of the flow is less than 2 percent.

Fundamentals of Compressible Flow: SI Units with Aircraft ...

Compressible flow (or gas dynamics) is the branch of fluid mechanics that

deals with flows having significant changes in fluid density. While all flows are compressible , flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less than 0.3 (since the density change due

to velocity is about 5% in that case). [1]
