Jamming Spoofing

GPS spoofing in its simplest form
(sometimes called denial-of-
service spoofing) involves

location information being sent to
the GPS receiver which is clearly
false (it might, for instance, tell a
ship out at sea that it is currently
located on land). It is immediately
clear to the user that they are
being spoofed, but it nonetheless

captured elsewhere or at a different time. These spoofed signals may be modified in such a way as to cause the receiver to estimate its position to be somewhere other than where it actually is, or to be located where ...

Spoofing attack - Wikipedia

The use of GPS jammers, long foreseen in navigation circles, has become a reality as criminals employ them to overcome tracking systems and steal vehicles. These low-powered transmitters (see photo), readily available over the Internet for as little as \$150, can block GPS reception in a vehicle's vicinity.

North Korea apparently regularly
jams GPS over significant chunks
of South Korea with a few
hundred watts. A spoofing attack
is much more complicated, and
will attempt to convince a
receiver that it's hearing a real
GPS signal. This requires
producing a sufficiently powerful
fake signal that overwhelms the
real signal at the receiver.

What are the differences between a jamming and a spoofing ...

The danger of GPS jamming,
which prevents the systems that
rely on GPS signals from being
able to 'navigate' to their targets;
and spoofing, where enemy
forces accurately simulate a GPS
