5.3. explain how evaluate the performance of replacement units against vehicle specification

transmission and driveline units and components

The driveline of a motor vehicle consists of the parts of the powertrain excluding the engine and the transmission. The configuration of the driveline, i.e. the portion of the powertrain after the transmission, depends on the various choices of wheels to be powered by the engine: front-wheel drive, rear-wheel drive and all-wheel drive.

The drivetrain is the part of a motorized vehicle which connects the engine and transmission to the wheel axles. The driveline includes everything in the chain from the engine to the drive wheels, but the drivetrain consists of everything after the transmission — all driveshafts, axles, joints, differentials and wheels.
