Viruses are not cells but non-living, infectious particles. They are capable of causing a number of diseases, including cancer, in various different types of organisms. Viral pathogens not only infect humans and animals, but also plants, bacteria, protists, and archaeans.

Viruses: Structure, Replication, and Diseases

Alive or not, viruses are an indisputable component of our planet 's interdependent life systems. While virologists, scientists who study viruses, have worked diligently to understand, prevent and manage diseases caused by viruses, efforts have also been underway to understand viruses that are not responsible for disease.

Viruses teeter on the boundaries of what is considered life. On one hand, they contain the key elements that... Function. First, viruses need to ...

What Are Viruses? | Live Science

Virus, infectious agent of small size and simple composition that can multiply only in living cells of animals, plants, or bacteria. Viruses possess unique infective properties and thus often cause disease in host organisms.

virus | Definition, Structure, & Facts | Britannica

The spike protein is found on the surface of the virus that causes COVID-19. COVID-19 mRNA vaccines are given in the upper arm muscle. Once the instructions (mRNA) are inside the immune cells, the cells use them to make the protein piece. After the protein piece is made, the cell breaks down the instructions and gets rid of them.

From Adenovirus to Zika virus, the Third Edition of best-selling Understanding Viruses provides a strong, comprehensive introduction to human viral diseases.

Understanding Viruses, Third Edition

When germs, such as bacteria or viruses, invade the body, they attack and multiply. This invasion, called an infection, is what causes illness. The immune system uses several tools to fight infection. Blood contains red blood cells, for carrying oxygen to tissues and organs, and white or immune cells, for fighting infection.

Understanding How Vaccines Work | CDC

We focus on six issues (the definition of viruses, the individuality and diachronic identity of a virus, the possibility to classify viruses into species, the question of whether viruses are living, the question of whether viruses are organisms, and finally the biological roles of viruses in ecology and evolution), and we show how they relate to classic questions of philosophy of biology and even general philosophy.
